

A. Artifact Appendix

A.1 Abstract

Obligatory

A.2 Artifact check-list (meta-information)

Obligatory. Use just a few informal keywords or one-line answers in all fields applicable to your artifacts and remove the rest. This information is needed to find appropriate reviewers and to gradually unify artifact meta information in Digital Libraries. Detailed instructions can be placed in the artifact README.

- **Algorithm:**
- **Program:**
- **Compilation:**
- **Transformations:**
- **Binary:**
- **Model:**
- **Model availability and access:**
- **LLM prompts and inference settings:**
- **Data set:**
- **Run-time environment:**
- **Container, VM, or locked environment:**
- **Hardware:**
- **Run-time state:**
- **Execution:**
- **Metrics:**
- **Output:**
- **Expected results and tolerances:**
- **Experiments:**
- **Proprietary EDA tools, PDKs, and licensed technology files:**
- **How much disk space required (approximately)?:**
- **How much time is needed to prepare workflow (approximately)?:**
- **How much time is needed to complete experiments (approximately)?:**
- **API cost or GPU-hours required (if applicable):**
- **Publicly available?:**
- **Code licenses (if publicly available)?:**
- **Data/model licenses and usage restrictions (if applicable):**
- **Workflow framework used?:**
- **Zenodo DOI for archived artifact:**

A.3 Description

A.3.1 How to access

Obligatory

Provide the review access path and the final Zenodo DOI if available. If large artifacts are hosted separately, identify the exact version or checksum used for artifact evaluation.

A.3.2 Hardware dependencies

A.3.3 Software dependencies

A.3.4 Commercial software and PDK dependencies

If applicable, list the exact tool, version, license assumptions, PDK or technology package, required files, setup or mount paths, environment variables, and smoke-test command. Do not include restricted installers, license files, or PDK contents unless redistribution is allowed.

A.3.5 Data sets

Describe included, downloaded, generated, or proprietary data sets, including versions, sizes, licenses or usage restrictions, and any public proxy data.

A.3.6 Models

For model-based artifacts, specify the exact model or API model, availability or access instructions, version/revision where applicable, and license or usage restrictions. For closed API models, include the provider, model ID, endpoint or service version if available, experiment date range, access assumptions, and known model-drift limitations. If LLMs materially affect the results, also summarize the prompts, inference settings, metrics, raw or cached outputs, tolerance bands, and expected API cost or local compute needed for validation.

A.4 Installation

Obligatory

Describe how to build, load, or activate the Docker image, VM, locked environment, or package setup, and include a smoke test. If commercial tools or PDKs are outside the container, describe the required mounts and environment variables.

A.5 Experiment workflow

Map the provided scripts, notebooks, or workflow commands to the paper results they validate.

A.6 Evaluation and expected results

Obligatory

For each key result, state the command or workflow reviewers should run, the expected output or metric, the acceptable tolerance or similar-result criterion, and whether the intended validation path is a full rerun, bounded subset rerun, cached-output validation, or evidence/log inspection.

A.7 Experiment customization

A.8 Notes

A.9 Methodology

Submission, reviewing and badging methodology:
