

A. Artifact Appendix

A.1 Abstract

Obligatory

A.2 Artifact check-list (meta-information)

Obligatory. Use short keywords or one-line answers for the fields that apply to your artifact, and remove the rest. This information is used to assign appropriate reviewers. Detailed instructions can be placed in the artifact README.

- **Algorithm or method:**
- **Programs, benchmarks, and data sets:**
- **Models and model availability:**
- **Compilation, binaries, tools, proprietary software, and PDKs:**
- **Run-time environment, hardware, and run-time state:**
- **Container, VM, or locked environment:**
- **Workflow framework and execution:**
- **Metrics, outputs, and tolerances:**
- **Preparation/runtime, disk space, GPU/API cost:**
- **Public availability, licenses, and restrictions:**
- **Zenodo DOI for archived artifact:**

A.3 Description

A.3.1 How to access

Obligatory

A.3.2 Hardware dependencies

A.3.3 Software dependencies

A.3.4 Commercial software and PDK dependencies

A.3.5 Data sets

A.3.6 Models

For model-based artifacts, specify the exact model or API model, availability or access instructions, version/revision where applicable, and license. If LLMs materially affect the results, also summarize the prompts, inference settings, metrics, raw or cached outputs, tolerance bands, and expected API cost or local compute needed for validation.

A.4 Installation

Obligatory

A.5 Experiment workflow

A.6 Evaluation and expected results

Obligatory

For each key result, state the command or workflow reviewers should run, the expected output or metric, the acceptable tolerance or similar-result criterion, and whether the intended validation path is a full rerun, bounded subset rerun, cached-output validation, or evidence/log inspection.

A.7 Experiment customization

A.8 Notes

A.9 Methodology

Submission, reviewing and badging methodology:
